In the Claims

1. (Original) A compactor wheel mountable on an axle of a compaction machine, said compactor wheel comprising:

S/N: 09/599,679

- a hub mountable to an axle of a compaction machine;
- a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;
- a plurality of compaction cleats circumferentially spaced on, transversely spaced across and mounted to said face of said rim; and
- an axle guard system comprising a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim toward said outer edge at least about the width of one of said cleats.
- 2. (Original) The compactor wheel as set forth in claim 1, wherein said axle guard system further comprises at least one circumferential barrier mounted on said cleat-free area so as to extend above said face.
- 3. (Original) The compactor wheel as set forth in claim 2, wherein said at least one circumferential barrier is mounted on said cleat-free area so as to extend radially outward from said face.
- 4. (Original) The compactor wheel as set forth in claim 2, wherein said at least one circumferential barrier is mounted on said cleat-free area adjacent said inner circumferential edge of said rim.
- 5. (Original) The compactor wheel as set forth in claim 2, wherein each of said cleats has a height, and said at least one circumferential barrier extends above said face a height greater than the height of said cleats.
- 6. (Twice Amended) A compactor wheel mountable on an axle of a compaction machine having a body suitable for compacting refuse, said compactor wheel comprising:

 a hub mountable to an axle of a compaction machine;

a rim mounted around the outer circumference of said hub, said rim having a face and an inner circumferential edge and an outer circumferential edge;

S/N: 09/599,679

a plurality of compactor wheel cleats circumferentially spaced on, transversely spaced across, and mounted to the face of said rim in a given orientation; and

an axle guard system comprising at least one circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim and located in an area absent any of the compactor wheel cleats in the given orientation, wherein said compactor wheel is suitable for supporting the body of a compaction machine.

- 7. (Original) The compactor wheel as set forth in claim 6, wherein said at least one circumferential barrier extends radially outward from said face.
- 8. (Original) The compactor wheel as set forth in claim 6, wherein said at least one circumferential barrier comprises a ring-shaped wall.
 - 9. (Canceled)
 - 10. (Canceled)
- 11. (Original) The compactor wheel as set forth in claim 10, wherein said at least one circumferential barrier includes buttressing structure for support.
- 12. (Original) The compactor wheel as set forth in claim 11, wherein said buttressing structure is a broadening of said at least one circumferential barrier at said face of said rim.
 - 13. (Canceled)
- 14. (Twice Amended) A compaction machine comprising:

 a body suitable for compacting refuse, said body having opposite sides;

 an axle having two ends and mounting said body; and

 a compactor wheel mounted on each end of said axle, one compactor wheel on
 each side of said body, each said compactor wheel comprising:

a rim mounted around the outer circumference of said hub, said rim having a face, an inner circumferential edge adjacent to one side of said body and an outer circumferential edge,

S/N: 09/599,679

a plurality of cleats circumferentially spaced on and mounted to said face of said rim, and

an axle guard system comprising [at least one] a circumferential barrier extending above said face and adjacent said inner circumferential edge of said rim, wherein the circumferential barrier has a face that is substantially perpendicular to the axle.

- 15. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 14, wherein said at least one circumferential barrier comprises a ring-shaped wall.
- 16. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 14, wherein said at least one circumferential barrier comprises a plurality of circumferentially spaced fins.
- 17. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 16, wherein said compactor wheel has an inner row of said cleats mounted adjacent to said inner circumferential edge, one of said fins is mounted to said rim between each pair of adjacent cleats forming said row.
- 18. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 17, wherein said at least one circumferential barrier includes buttressing structure for support.
- 19. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 18, wherein said buttressing structure is a broadening of said at least one circumferential barrier at said face of said rim.
- 20. (Amended) The [compactor wheel] <u>compaction machine</u> as set forth in claim 14, wherein said axle guard system further comprises a cleat-free area formed circumferentially around said rim on said face and extending widthwise from said inner edge across said rim

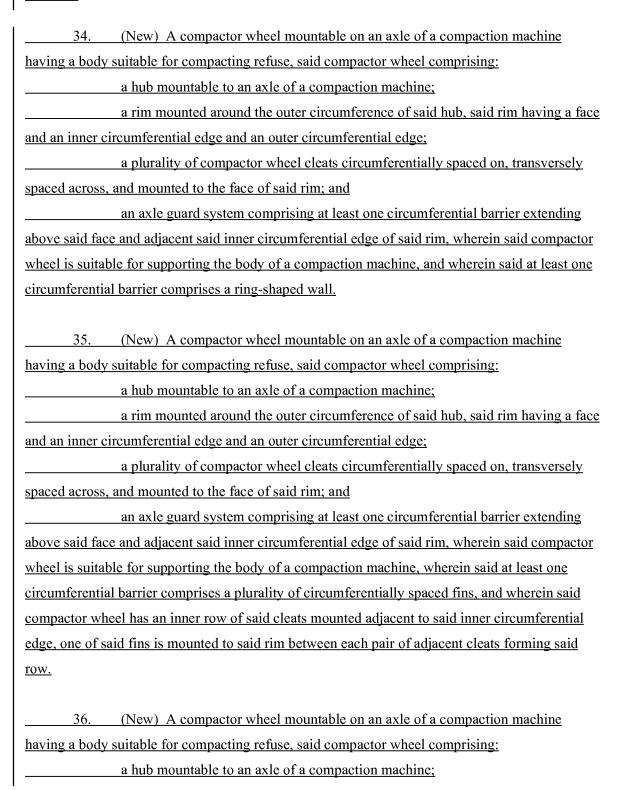

toward said outer edge a distance, said at least one circumferential barrier being mounted on said cleat-free area.

21.	(Canceled)
22.	(Canceled)
23.	(Twice Amended) A compaction machine comprising:
	a body suitable for compacting refuse, said body having opposite sides;
	an axle having two ends and mounting said body; and
	a compactor wheel mounted on each end of said axle, one compactor wheel on
each side of sa	id body, said compactor wheel comprising:
	a hub mountable to said axle;
	a rim mounted around the outer circumference of said hub, said rim having a
face, an inner	circumferential edge adjacent to one side of said body, and an outer circumferential
<u>edge;</u>	
	a plurality of tooth-shaped compaction cleats circumferentially spaced on,
transversely sp	paced across and mounted to said face of said rim; and
	an axle guard system comprising a cleat-free area formed circumferentially
around said rin	n on said face and extending widthwise from said inner edge across said rim
toward said ou	ter edge a distance to reduce refuse accumulation about the axle of the compaction
machine.	
24.	(Canceled)
25.	(Twice Amended) A compaction machine comprising:
	a body suitable for compacting refuse, said body having opposite sides;
	two axles, each axle having two ends and mounting said body; and
	a compactor wheel mounted on each end of each of said axles, each said
compactor who	eel comprising:
	a hub mountable to said axle;

cleats and at least one circumferential barrier extending above said face and adjacent said inner

circumferential edge of said rim in an area of said rim absent any of the cleats in the given

orientation, wherein said compactor wheel is suitable for supporting the body of a compaction machine.
